## Sales Intellect Point of Sale and Inventory Management Software

Transform your smartphone or tablet into a complete Point of Sale system. Manage sales, inventory, and your employees with ease. Setup multiple outlets even in different business types and manage them online from anywhere.

- Manage sales seamlessly
- Inventory management
- Manage shops
- Manage teams and employee performance
- Customer loyalty
- Reporting and analytics
- Sell from a smartphone, tablet or android POS terminal
- Save and manage pending bills (Hold Bill)
- Keep recording sales even when offline
- Issue printed or share electronic receipts
- Connect a receipt printer/barcode scanner
- Dashboard portal to monitor real-time sales & stock

# Point Of Sale

## Sell from a wide range of devices

- Sales Intellect POS works on Android devices, smartphones, tablets and windows based computers.

## Print or send receipts (WhatsApp)

- Give the receipt to customers in a way they prefer: printed or sent to an email or WhatsApp.

## Multiple payment methods

- Whether it's cash or card, customer account, or any combination of them – you will have a choice.

## Hold / Recall Receipts

- Create, save and edit orders. Customers can pay when it's convenient

## Offer Customer Discounts

- Apply discounts to the receipt or specific items.

## Process Receipt Refunds

- Refund the selected item or all items on the receipt.

## Work Offline With No Internet

- Make sales with weak or unstable internet. All data will be automatically synced once connection is restored.

## Easy Barcode Scanning

- Scan barcodes on items during a sale with built-in rear camera of your mobile device or using a handheld barcode scanner.

## Cash / Shift Management

- Track cash movement to reduce mistakes and staff manipulation. Do cash up and view shortfalls or surplus per shift.

## Multi Store Management

- Manage multiple stores under one account. Track your sales, inventory, employees and customers — everything you need to know in one place.

# Inventory Management

## Import Stock Items

- Quickly add thousands of items using the CSV-spreadsheets.

## Track Stocks

- Track the stock of products and their components, create combo products.

## Generate Purchase Orders

- Plan purchases, send via email to suppliers, track stock receipts and manage vendor relationships.

## Goods Received Notes

- Receive stocks based on purchase order or directly to the inventory.

## Inter Branch Transfers

- Move stocks between your stores and view the history of transfers.

## Stock Adjustments

- Increase and decrease stock levels for received items, damages and loss.

## Manufacturing - Production

- Track stock of items produced out of ingredients.

## Stock Taking - Inventory Counts

- Perform full or partial stock-takes with a barcode scanner or manually and produce variance report.

## Inventory Valuation Report

- View report on the cost, retail value and potential profit of your inventory.

## Inventory History Report

- Have a complete view of the history of GRN, Stock Adjustments, Transfers and gain insights of how stock was moved.

# Employee Management

## View Sales By Employee

- Track each employee performance and take informed business decisions.

## Smart Management

- Information on the workload per hour allows for efficient management of your staff.

## Access Rights / User Roles

- Manage access to sensitive information and functions.

## Calculate Commission Based Sales

- Track sales by user and easily calculate commission.

# Sales Analytics

## Compare Sales By Period

- Track the sales growth or decline compared with the previous day, week, month and promptly react to changes.

## Sales By Popular Items

- Sales by item analytics allows the best-selling items to be determined and therefore the right purchasing decisions can be made.

## Transaction History Report

- Receipts history review allows you to monitor each transaction: sales, refunds, discounts.

## Shift Status Report

- Identify the cash lack at the end of the shift and track employees inaccuracy or manipulations.

# CRM & Loyalty Program

## Build Customer Database

- Analyze the number of visits and the customer purchases amount, to identify your most loyal customers.

## Customer Loyalty Program

- Motivate customers to make recurring purchases, awarding them bonus points.

## Customer Purchase History

- View customer purchase history to provide personalized service

## Customer Notes

- Take notes about customers to remember their preferences.

# Restaurant & Bar Features

## Kitchen and Bar Printers

- Use kitchen printers at cafe or restaurant to inform cooking staff what to prepare from an order.

## Dining and Takeaway Options

- Note whether customers are dining in, taking their order out, or requesting delivery.

## Run Tables or Serve To Rooms

- Create tables and rooms and quickly assign customers to open tickets for continuous ordering. For example, Table 1, Table 2, etc

## Product Modifiers

- Add toppings and add-ons to the items by using modifiers

## Tablet Ordering

- Take orders from the table and send them direct to the kitchen using a tablet

## Kitchen Display System

- Improve order preparation using the kitchen display system. It rings a notification when a new order has been received.

Color can be customized according to your needs
